

United States Navy—Skid Mounted Solar Systems for Deployment in Central and West Africa: Mozambique, Gabon, Sierra Leone, Gambia, Liberia, Guinea, San Tome, Democratic Republic of Congo.

Skid mounted power systems can be deployed easily to a new location. Heavy duty reinforced steel skids, reinforced array frames, and reinforced battery enclosures prevent damage to the systems during transit.

The 640W solar array completely shades the top and front of the enclosure. Additional sun shades shield the enclosure from the morning and afternoon sun to moderate temperatures inside the enclosure.
