

Solarcraft 30TES/TEM: Replaces the Bristol 3330 Panel

SOLARCRAFT
POWER PRODUCTS

Solarcraft has a quick solution to update and retrofit your Bristol[®] 3330 to the newer Control Wave[®] system. The 30TES/TEM is a pre-wired panel for the Control Wave Micro, same-sized with pre-drilled holes to install where your old Bristol panel is mounted. It can be installed in an enclosure or on a rack system.

For installations with a Control Wave display, we provide a hinged bracket on the panel for mounting the display. There is space on the panel for interposing relays where required. Please specify your requirements when you order.

We keep a small number of Control Wave RTUs in stock should you need a complete panel.

▲ Typical Bristol 3330 installation.

Installation Guidelines

1. Install your Control Wave Micro on the 30TES/TEM panel using the 4 pre-drilled holes, or have us install it prior to shipment to the field.
2. Connect the pre-wired terminals plugs to the Control Wave Micro.
3. Unplug the connections from the Bristol 3330, remove the six nuts that hold the panel in place. Remove the panel.
4. Install the Solarcraft 30TES/TEM panel; tighten the six nuts to hold the panel in securely place.
5. Connect your existing wires to the new 10-terminal plugs on the 30TES/TEM panel, tightening with a small screw driver. Plug the connectors into the 30TES/TEM.
