SOLARCRAFT POWER PRODUCTS

Stainless steel TRONIX-BOXES with power control and distribution are hung on a 12-battery MEGA-BOX with a small footprint provides power on an offshore platform.

Solarcraft **DUBL-DUTY ENCLOSURES** DUBL-DUTY enclosures offer unique solutions to packaging challenges, save time and money, and avoid costly installation errors. Fabricated from heavy gauge aluminum or stainless steel, DUBL-DUTY enclosures feature Nema 3R/4X construction with a vented 3R battery compartment separated from the sealed 4X electronics compartment by a welded bulkhead.

This unique and proprietary construction allows the enclosure to do the work of two or three separate enclosures. It also eliminates the need for a rack with conduit connecting the various enclosures.

Solarcraft can also integrate your electronics, radios, or other devices, power them up and test them prior to shipping, assuring minimal installation time and errors.

Features

- w Heavy gauge aluminum or stainless steel construction
- w Integral mounting angles accommodate lifting eyes, solar panels, antennae, sun shades, pedestals, Unistrutti and other enclosures
- w All stainless enclosure hardware, stainless mounting hardware included
- w High reflectance white powder-coat finish keeps batteries and electronics cooler
- w Designed for outdoor installation
- w Eliminates the need for enclosure racks
- w Solar and DC-UPS configurations available
- w 5-year warranty, 30 year design life
- w Deep cycle, gel maintenance-free batteries
